

JOIN NODES OF MULTIPLE SUBPATHS

To join the nodes of multiple subpaths

1. In the toolbox, click the **Shape tool** .
2. Press **Shift**, and click a **node** from each **subpath**.
3. Click the **Extend curve to close** button  on the property bar.

- If you want to join nodes from separate **curve objects**, you must first combine them into a single curve object, and then join the end nodes of the new subpaths.
